                                                                                                                       The invention relates to a method for diagnosing a disorder characterise by expression of a human cancer associated antigen precursor coded for be a nucleic acid molecule (NAM). The method comprises: (a) contacting a biological sample isolated from a subject with an agent that specifical blinds to the NAM, an expression product or a fragment of an expression product complexed with an HLA molecule; and (b) determining the interaction between the agent and the NAM or the expression product as a determination of the disorder. The products and methods can be used in the diagnosis, monitoring, research, or treatment of conditions characterised by the expression of various cancer associated antigens. The invention provides nucleic acid sequences and encoded polypeptides which are cancer associated antigen precursors expressed in human breast cancer, renal cancer, colon cancer, gastric cancer, prostate cancer and line.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                            10-OCT-1997;

The invention relates to subunits cellulose synthetic equipment, that can used to increase the amount cellulose synthesised by a plant. The proteins and genes encoding them can also be used to improve the properties of the cellulose being produced by a plant.

EBNA 1 protein is used to stably maintain episomes containing EBV origin of replication (orif) and a gene encoding protein or RNA of interest. Eucaryotic host cells expressing EBNA 1 protein are transfected with these episomes to produce recombinant cell lines expressing multiple genes of interest. This provides a rapid and reliable method of stably expressing multiple genes in transfected cells. The episomes are useful in the transfection of genes encoding receptors, transporter proteins, ion channels, adhesion molecules and transcription factors. The episomes carrying desired genes can also be used to transfect cells in gene therapy, antisense therapy, for gene amplification, cell immortalisation, etc.

This sequence is a fragment of the Kaposi's sarcoma-associated herpesvirus (KSHV) LUR (long unique region). This fragment contains coding regions for KI, ORF4 which encodes the complement binding protein v-CBP, ORF6 which encodes a ssDNA binding protein (SSBP), ORF7 which encodes a transport protein, ORF8 which encodes glycoprotein B, ORF9 which encodes OVID-10, ORF10, ORF11, KZ which encodes viral interleukin-6 (vIL-6), ORF02 which encodes dlhydrofolate reductase (DHFR), K3 which encodes BHV4-IE1 I, ORF10 which encodes Thymidylate synthase, K4 which encodes WMIP-I, K7, ORF16 which encodes BHV4-IE1 II, K6 which encodes vMIP-1, K7, ORF16 which encodes BHV4-IE1 II, K6 which encodes vMIP-1, K7, ORF16 which encodes BHV4-IE1 II, K6 which encodes In, ORF18 and ORF19 which encodes Tegument protein I.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                  Kaposi's sarcoma; acquired immune deficiency syndrome; AIDS; DHFR; Bcl-: dihydrofolate reductase; LUR; long unique region; vaccine; prophylaxis; diagnosis; treatment; HTV8; complement binding protein; v-CBP; SSBP; ssDNA binding protein; transport protein; glycoprotein B; pol; vII-6; DNA polymerase; viral interleukin-6; BHV4-IE1 I; thymidylate synthase; vMIP-II; BHV4-IE1 II; vMIP-I; capsid protein I; tegument protein I; ds.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                              1433
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                        Kaposi's sarcoma-associated herpes virus nucleic acid -
di:hydro:folate reductase and is useful for treatment, |
or diagnosis of Kaposi's sarcoma

The DHFR protein is useful for vaccination, prophylaxis, diagnosis and treatment of a subject with Kaposi's sarcoma and for detecting expression of a DNA virus associated with Kaposi's sarcoma in a cell.

the Kapósi's sarcoma-associated herpes virus (KSHY). KSHY is also known as human herpes virus 8 (HHY8). This sequence contains the DNAs of the invention which encode KSHY polypotides selected from: (a) viral macrophage inflammatory protein (MIP) II; (b) viral interleukin-6 (IL-6); (c) viral IRF 1; (d) complement-binding protein; glycoproteins B, M or L; (d) capsid protein IV encoded by ORF65; and (e) immediate early protein
                                                                                                        New nucleic acid encoding Kaposi's sarcoma associated herpes proteins - useful for, e.g. detecting levels of HHV8 in, and preparation of vaccines for treatment of, HIV patients
                                                              This sequence represents the long unique region
                                                                                                                                                                          Bohenzky

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                           encoded by ORF73. Labelled probes for the nucleic acid, proteins encoded by it, and antibodies (Ab) specific for the proteins are useful for detecting HHV8, specifically for diagnosis of Kaposi's sarcoma, in body fluids or tissue samples. HHV8 infections can be treated with antisense or triplex forming molecules or agents that bind specifically to the protein. Ab may be used for prophylaxis or treatment of HHV8 infection, while the protein can be used in protective vaccines. Ab may also be used to differentiate between lymphomas, and HHV8 may be implicated in many other lymphoproliferative diseases such as lymphomas, leukaemia, splenomegaly and mycosis fungoides. Cells and animals containing the nucleic acid are useful for drug screening. HHV8-derived peptides can be used as targets for antivital drugs, e.g. dihydrofolate reductase gene can be inhibited with methotrexate. These can also be used to determine the immune status of a patient infected with HIV. HHV8 derived protein

                   The present sequence is an anti-sense strand of commercially available plasmid pCMYEBNA from which Epstein Barr Virus Nuclear Antigen 1 (EBNA 1) encoding DNA is obtained. EBNA 1 protein is used to stably maintain episomes containing EBV origin of replication (orip) and a gene encoding protein or RNA of interest. Eucaryotic host cells expressing EBNA 1 protein are transfected with these episomes to produce recombinant cell lines expressing multiple genes of interest. This provides a rapid and reliable method of stably expressing multiple genes in transfected cells. The episomes are useful in the transfection of genes encoding receptors, transporter proteins, ion channels adhesion molecules and transcription factors. The episomes carrying desired genes can also be used to transfect cells in gene therapy, antisense therapy, for gene amplification, cell immortalisation, etc.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                       Anti-sense strand; plasmid pCMVEBNA; EBNA 1; episome; transfection; Epstein Barr Virus Nuclear Antigen 1; origin of replication; EBV oriP; eucaryotic host cell; recombinant cell line; ion channel; multiple gene expression; receptor; transporter protein; gene therapy; transcription factor; adhesion molecule; antisense therapy;

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                              1133
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                             This invention describes a novel method for generating an antisense library targeted to a selected RNA transcript. The methods can be used for identifying antisense agents and for identifying target sites for antisense-mediated inhibition of a selected gene. The use of a direct library for target site selection significantly simplifies the screening process, since only very small libraries need be prepared and assayed. This sequence represents the vector pShuttle which is used in the method
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                          7843
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                       1073
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                   7903

                                                                                      Š
                                                                                                                                                                                                                   This polynucleotide comprises the DNA sequence of vector plasmid CC pCMVKmTTR-EPI, which contains an Epstein-Barr virus (EBV) origin CC of replication from plasmid pCEP4, a coding region for EBV nuclear antigen A from pCEP4, a pair of inverted terminal repeats from CC adeno-associated virus, a cytomegalovirus enhancer/promoter, a CC bovine growth hormone polyA sequence, and a kanamycin resistance selectable marker. Polynucleotides encoding polypeptides, such as CC erythropoietin or leptin, and ribozymes and antisense CC polynucleotides can be inserted into the vector. The vector is preferred for use in novel compositions and methods for improved CC agents are used to increase the frequency of uptake of a nucleic acid (see also V21684-86) into a cell. The polycationic agent can condense with the nucleic acid and inhibit serum and/or nuclease degradation of the nucleic acid and inhibit serum and/or a vector, may express a therapeutic protein or a vaccinating viral CO r cancer antigen, or is itself therapeutic (antisense or ribozyme). The methods and compositions can be used in the gene

No. is the number of results predicted by chance to have a score greater than or equal to the score of the result being printed, and is derived by analysis of the total score distribution.

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                             The invention relates to a method for diagnosing a disorder characterised by expression of a human cancer associated antigen precursor coded for by a nucleic acid molecule (NAM). The method comprises: (a) contacting a biological sample isolated from a subject with an agent that specifically pinds to the NAM, an expression product or a fragment of an expression product complexed with an HLA molecule; and (b) determining the interaction between the agent and the NAM or the expression product as a determination of the disorder. The products and methods can be used in the diagnosis, monitoring, research, or treatment of conditions characterised by the expression of various cancer associated antigens. The invention provides nucleic acid sequences and encoded polypeptides which are cancer associated antigen precursors expressed in human breast cancer, renal cancer, colon cancer, gastric cancer, prostate cancer and

                            The invention relates to a method for diagnosing a disorder characterised by expression of a human cancer associated antigen precursor coded for by a nucleic acid molecule (NAM). The method comprises: (a) contacting a biological sample isolated from a subject with an agent that specifically binds to the NAM, an expression product or a fragment of an expression product complexed with an HLA molecule; and (b) determining the interaction between the agent and the NAM or the expression product as a determination of the disorder. The products and methods can be used in the diagnosis, monitoring, research, or treatment of conditions characterised by the expression of various cancer associated antigens. The invention provides nucleic acid sequences and encoded polypeptides which are cancer associated antigen precursors expressed in human breast cancer, renal cancer, colon cancer, gastric cancer, prostate cancer and ling cancer.
                                                                                                                                                                                                                                                                                                                                                                                            22-JUN-1998;

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                 The present sequence represents a human expressed sequence tag (EST). The polynucleotide, which is a secreted EST, and the encoded protein are predicted to have useful biological activities which would make them suitable for treating, preventing or ameliorating medical conditions in humans and animals, although no supporting data is given. Suggested activities include nutritional activity, immune stimulating or suppressing activity, hemmatopolesis regulating activity, tissue growth activity, activin/inhibin activity, chemotactic/chemokinetic activity, haemostatic and thrombolytic activity. Teceptor/ligand activity, anti-inflammatory activity cadherin/tumour invasion suppressor activity, tumour inhibition activity. The polynucleotide may also be useful for gene therapy.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                  New polynucleotides encoding human secreted proteins - derived e.g. human blood, kidney, foetal lung, placenta, testes, brain, ovary, pituitary, retina and colon cDNA libraries.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                          Agostino I

CC directed against at least 2 mRNAs selected from target genes, coding and conor-coding regions of RNAs corresponding to target genes, gene cc initiation codons, genomic flanking regions, intron-exon borders, the cc 5'-end, the 3'-end and the juxta-section between coding and non-coding cregions and all segments of RNAs encoding proteins associated with one cc or more diseases, conditions or mixtures. The antisense oligonucleotides considered with one colon proteins associated with one colon proteins associated with one colon conditions. Typical diseases and conditions creatment of diseases and conditions. Typical diseases and conditions care those associated with impaired respiration and inflammation, cc including lung diseases, pulmonary vasoconstriction, inflammation, cc allergic rhinitis, acute asthma, allergies, asthma, impeded respiration, crespiratory distress syndrome, pain, cystic fibrosis, pulmonary consoconstriction, emphysema, chronic obstructive chypertension, pulmonary vasoconstriction, emphysema, chronic obstructive carcinomas e.g. colon cancer, breast cancer, lung cancer, panoreatic carcer, hepatocellular carcinoma, kidney cancer, melanoma, hepatic concer, bepatocellular carcinoma, kidney cancer, melanoma, hepatic cancer, melanoma, hepatic cancer, melanoma, allergies of cancers which may metastasize or have metastasized to the lungs, including breast and prostate cancer.
                                                                                                                                                                                                                                                                                                                                                                                                                                                         Query Match

                                                                                                                                                                                                                                                                                       The present sequence is a DNA encoding Epstein Barr Virus Nuclear Antigen 1 (EBNA 1), which is obtained from commercially available plasmid pCMYEBNA. EBNA 1 protein is used to stably maintain episomes containing EBV origin of replication (oriP) and a gene encoding protein or RNA of interest. Eucaryotic host cells expressing EBNA 1 protein are transfected with these episomes to produce recombinant cell lines expressing multiple genes of interest. This provides a rapid and reliable method of stably expressing multiple genes in transfected cells. The episomes are useful in the transfection of genes encoding receptors, transporter proteins, ion channels, adhesion
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                           Epstein Barr Virus Nuclear Antigen 1 DNA; plasmid pCMVEBNA; EBNA 1; episome; transfection; origin of replication; EBV oriP; receptor; eucaryotic host cell; recombinant cell line; ion channel; gene thera multiple gene expression; transporter protein; transcription factor; adhesion molecule; antisense therapy; gene amplification; cell immortalisation; ds.
